

FuseSecure: Cloud security made simple

FuseSecure is a comprehensive, multi-layered security solution that locks down your application workloads on the cloud. FuseSecure combines leading technology, and our own intellectual property, to address your security needs.

Multi-layered security

FuseSecure takes a multi-layered approach to security, working together these layers of security provide superior threat detection and prevention.

Perimeter layer: Protects against external threats

- Network and traffic monitoring
- Connectivity options
- Firewalls
- Access control lists

User access layer: Restricts user access to information

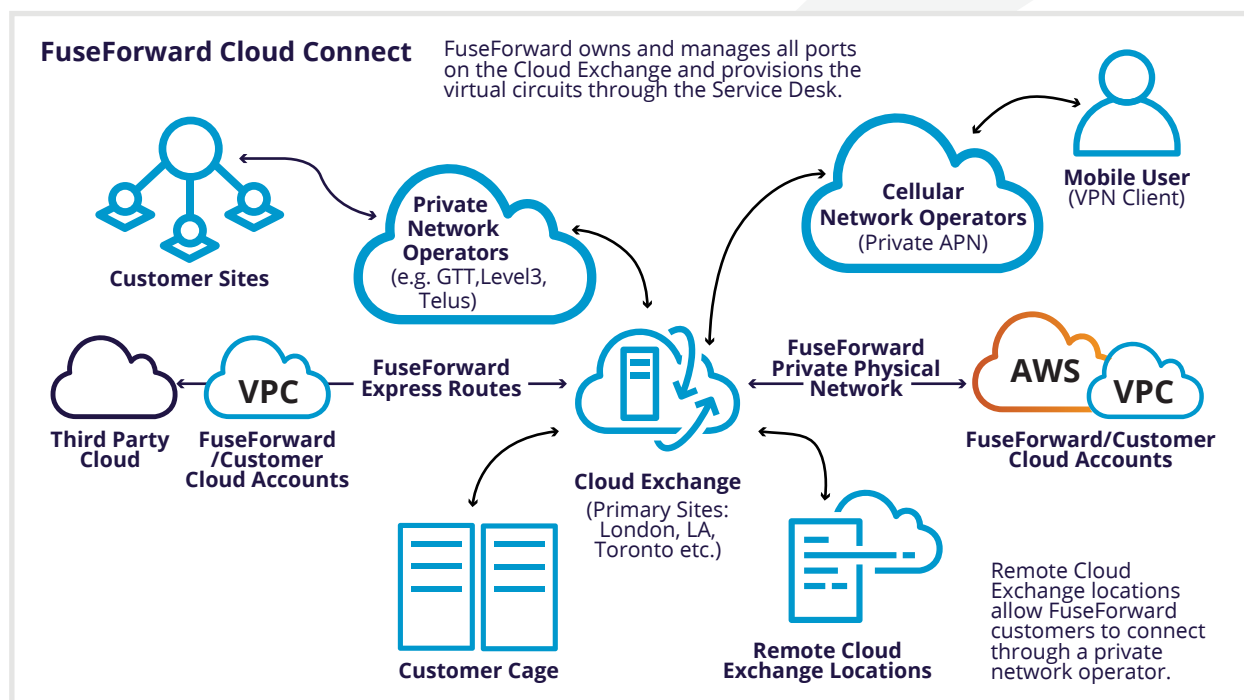

- Access control and monitoring
- Segregated user store
- Single sign-on
- Multi-factor authentication

Encryption layer: Protects your data

- Encrypts data at rest and in transit
- Configures encryption functionality

FuseForward Cloud Connect: A secure, private connection
